Sweet Sudan Grass
Best summer pasture and
hav crop. More grazing,
food value and palatapility
Hred by crossing sorghum
hav sudan. Livestock relish
its strong eat it faster consume met limacreasing milk
and meat production. They
eat it to the ground perfore
touching other crops light
stools more, has broader
leaves, larger stems, grows
faster and taller than other
sudan. Palatable grazing
lasts longer. 25 lbs. acre.

Open Pollinated Corn

Quart (2 lbs.), postpaid, 60c., on all varieties Bag lots (2 bushels), 10c. bushel less

WOOD'S QUAIL PLANTING MIXTURE Sow to Attract and Multiply Game Birds CONTAINS BICOLOR AND SCARIFIED SERICEA LESPEDEZAS

Va. Game Commission recommends it: "Ample food is necessary throughout the year. Scarcity of food and cover in winter definitely limits the number of quail that survive. Cover is any vegetation giving protection from enemies, the elements, and a refuge for roosting and nesting. Quail eat a variety of seeds, almost all legumes, preferably lespedezas, cowpeas and small soybeans. The 15 to 30 feet of field next to woods produces a small stunted crop, grown at a loss. Sow in wildlife food and cover. It furnishes turnrows, retards erosion and tree growth."

Old-time bird hunters know where to find birds—in patches of cowpeas, millet, etc. However, food from one of these crops lasts only a short while. Then quail must range elsewhere for food. We have examined hundreds of quail "craws" many years to study their food habits. Our mixture contains 16 kinds most frequently found in quail stomachs. These mature at different times, furnish seed and greens the year round, enables a farm to grow more quail and attracts them from other areas. It assists young birds to grow quickly and keep plump.

It contains lespedezas, six weeks and mid-season cow peas and late peas to hold birds during hunting season. It has early, medium and late millet, Brown Top Millet, so popular with Southern hunting preserves. It has dwarf early and late combine milo, early and late small seeded soybeans, bene, sudan grass, sesbania, and buckwheat, relished by birds. Rape furnishes green food in winter.

It furnishes low cover to protect birds from their enemies. Our formula is based on years testing on our own and some of the largest Southern hunting preserves. Plant it in patches where you hunted last fall and find more birds next season.

Broadcast 25 lbs. per acre May to July on prepared land. Fertilize well, disk, harrow and sow every year. For Quail in long strips, near cover, fences, ditches or hedgerows, in tobacco beds, openings or fire lanes in woods, 5 lbs. per strip, 400 ft. by 15 ft. For Wild Turkeys or Pheasants wider strips in secluded spots. For Doves 1 or 2-acre plots in the center of open areas.

UNTREATED ALFALFA SEED MADE AVAILABLE IN POUND UNITS

We have found that people over the south with arthritis and rheumatism are writing in for untreated alfalfa seed in small quantities, and that they were using this seed for making alfalfa seed tea. To supply this demand, we have selected the finest bright golden seed which is untreated and of the highest quality, being over 99½% pure. In fact, we know of no finer seed produced in this country.

Directions for making the tea are furnished with each pound package. Packed in double box to prevent any contamination.

Price, \$1.75 per pound, postpaid

INFORMATION REGARDING SEEDS FOR SUMMER PLANTING

There is developing a very heavy demand at this time for Soybeans, Cowpeas and Sudan Grass. All available stocks of Sorghums, both for syrup and forage purposes, as well as Millet, are entirely enhausted. As a substitute for Sorghum, we would suggest both Common and Sweet Sudan Grass. Supplies of Sudan are very short this year, and if our customers are going to be needing stocks, would suggest their early order. Sudan Grass, as you know, is one of our quickest summer hay crops, and the demand is heavy at this time.

Kindly note lower prices on Perennial Grasses and Clover seeds. Alfalfa is in short supply, and unless we have early crops produced in Oklahoma there will be a shortage of Alfalfa seed for August and early September planting.

We also call particular attention to the planting of Edible Peas for your garden.

Milo, Millet, Peanuts, Etc.
